$2,025 MM	0.03%	VITNX	5.5%	08/31/01	0870

Investment objective

Vanguard Institutional Total Stock Market Index Fund seeks to track the performance of a benchmark index that measures the investment return of the overall stock market.

Investment strategy

The fund employs an indexing investment approach designed to track the performance of the CRSP US Total Market Index, which represents nearly 100% of the investable U.S. Stock market covering large-, mid-, small-, and micro-cap stocks regularly traded on the New York Stock Exchange and NASDAQ. The fund invests by sampling the index, meaning that it holds a broadly diversified collection of securities that, in the aggregate, approximates the full index in terms of key characteristics. These key characteristics include industry weightings and market capitalization, as well as certain financial measures, such as price/earnings ratio and dividend yield.

Note: Vanguard recently announced upcoming changes to the names of multiple Vanguard U.S. equity index funds. Following Morningstar's recent acquisition of CRSP, the benchmarks tracked by these index funds will be rebranded from CRSP to Morningstar. In addition, Vanguard is adding "Morningstar" to the names of the funds tracking the Morningstar Indexes. For example, Vanguard Total Stock Market Index Fund will be renamed Vanguard Morningstar Total Stock Market Index Fund. The name changes for both the Vanguard funds and the benchmarks are expected to occur in July 2026. A full list of funds changing names can be found on Vanguard's website.

Periods ended June 30, 2026

	Quarter	Year to date	One year	Three years	Five years	Ten years
Fund	15.66%	11.08%	23.18%	20.44%	12.26%	15.06%
Benchmark	15.65%	11.06%	23.16%	20.42%	12.25%	15.04%

The performance data shown represent past performance, which is not a guarantee of future results. Investment returns and principal value will fluctuate, so investors' shares, when sold, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data cited. For performance data current to the most recent month-end, visit our website at vanguard.com/performance. The performance of an index is not an exact representation of any particular investment, as you cannot invest directly in an index.

Figures for periods of less than one year are cumulative returns. All other figures represent average annual returns. Performance figures include the reinvestment of all dividends and any capital gains distributions. All returns are net of expenses.

Spliced Institutional Total Stock Market Index: Dow Jones U.S. Total Stock Market Index (formerly known as the Dow Jones Wilshire 5000 Index) through April 8, 2005; MSCI US Broad Market Index through January 14, 2013; CRSP US Total Market Index thereafter.

Plain talk about risk

As with any investment, an investment in the fund could lose money over any time period. The fund's share price and total return may fluctuate, potentially within a wide range. The principal risks of investing in the fund are summarized below. Each of the following risks could affect the fund's performance:

General Market Risk. The markets in which the fund invests can be affected by a variety of factors. These factors, which can be real or perceived, may include economic, market, political, and regulatory conditions and developments as well as local, regional, or global events such as wars, military conflicts, natural disasters, and public health issues. In addition, investor sentiment and expectations regarding these factors can also impact the markets. Different parts of the market, including different industries and sectors as well as different types of securities, may react differently to factors that affect the market. These factors can contribute to market uncertainty, market volatility, and fluctuations in the value of the fund's investments, thereby resulting in potential losses to the fund over short or long periods.

Investing in Equity Markets. The fund invests in the equity markets. Equity markets have historically been cyclical, having periods of time when stock values rise and fall. Market volatility can lead to significant fluctuations in stock values, resulting in potential losses to the fund.

Market Capitalization (Market Cap). Companies are generally classified into three types of market cap depending on their size: small-, mid-, and large-cap. Companies can be further classified into micro- or mega-cap. Different factors can affect each market cap uniquely, and historically small-and mid-cap stocks have typically been more volatile due to the effects of changing economic conditions. Large companies may not reach the same levels of growth or performance as smaller companies, and they may be slower to react to competitive challenges. The performance of funds that invest in a subset of market caps could diverge from the performance of a fund that is focused on a broader representation of the stock market.

Index Investing. The fund is subject to risks associated with index investing. Because the fund generally seeks to track the performance of the target index regardless of how the target index is performing, the fund's performance may be lower than it would be if it were actively managed. Additionally, because the fund does not hold all of the securities included in the target index, it is subject to the risk that the representative sample of securities selected by the advisor will, in the aggregate, vary from the investment profile of the full target index. The performance of the fund's investments, in the aggregate, may not match the investment performance of the target index. This risk, known as tracking error risk, may be heightened during times of increased market volatility or under other unusual market conditions. The fund also could be negatively impacted by changes to the target index made by the index provider or by errors made by the index provider. Any gains, losses, or costs associated with or resulting from an error made by the index provider will generally be borne by the fund and, as a result, the fund's shareholders.

Management of Certain Similar funds. The name, investment objective, principal investment strategies, and risks of the fund are similar to another separate fund managed by the fund's portfolio managers. However, the investment results of the fund may be higher or lower than, and there is no guarantee that the investment results of the fund will be comparable to, that other fund.

Nondiversification. By tracking its broad-based target index, the fund could become nondiversified, as defined under the Investment Company Act of 1940, due to events such as an index rebalance or market movement. The performance of nondiversified funds may be negatively impacted by relatively few securities or even a single security and their shares may experience significant fluctuations in value.

Concentration Risk. Except as may be necessary to approximate the composition of its target index, the fund will not concentrate its investments in the securities of issuers whose principal business activities are in the same industry or group of industries. If the target index becomes concentrated and the fund needs to concentrate in the same industry or group of industries, its performance could be negatively impacted by the industry or industries in which it is concentrated.

Information Technology Sector. As of the fund's most recent fiscal year end, stocks of companies within the information technology sector made up a significant portion of the target index. As a result, the performance of the target index, and therefore the performance of the fund, may be impacted by the general condition of the information technology sector.
